Subject FW: Cargill

Hi Kristine,

During a lunch conversation with Chip and Eric today we talked about the elevated PCB detections (new LWG data) near the Cargill facility on the east side of the Willamette. This is an area that DEQ was tracking because of the presence of an old Westinghouse warehouse facility that is located within the stormwater drainage basin. I would want to confirm some things like sed sample locations relative the Westinghouse outfall etc., but per Chip's suggestion at lunch today, EPA may want to add Westinghouse to the 104E letter list. I will also talk with Tom and Karen about following up with the City regarding a storm line evaluation. As a site note, the City Water Bureau is the current owner of the Westinghouse site.

I am out of the next week, but I will check in with you when I get back.

Have a good 4th.

Matt

<<outfall.doc>>

Chip and Eric,

Attached is a map fragment that Dawn Sanders forwarded to me a when I asked about what outfall basin the former Westinghouse facility, located at 614 N Tillamook, likely would be in. I believe this was a cross check on the FSP which generated the recent data off of Cargill.

I am out of the office next week. Assuming that the PCB hits we talked about at lunch are in this area, we should plan on following up after next week when I am back. Jim Anderson is also familiar with the site. Feel free to check in with him next week if you want to before I get back.
